

**DEDICATED SERVER MANAGEMENT CARD**  
**WITH HOT SWAP FUNCTIONALITY**

**Abstract of the Disclosure**

5           A server system includes a plurality of printed circuit assemblies including at least  
one host processor card. A management card is coupled to the plurality of printed circuit  
assemblies. The management card is dedicated to monitoring and managing operation of  
the server system, including monitoring and managing on-line insertion and removal of  
the printed circuit assemblies in a compact peripheral component interconnect (cPCI)  
10   server system.
